Assembly Manual Shelving

Congratulations on your new Groundfridge! This manual will help you assemble and put in the shelving on the inside of your Groundfridge. It also includes product information on stuff like maintenance, durability, warnings, etc.. You can use your Groundfridge for storing wine and food, such as root vegetables, potatoes, tomatoes, aubergines, onions, pumpkins, cabbages, cheeses and more.

Once you've put them in, these shelves will allow you to make the best use of your Groundfridge's storage capacity. Their round-shaped design allows you to store lots of products, whilst also leaving you enough room to manoeuvre. The five shelves will offer you all the storage capacity you need. The Groundfridge has a storage capacity equivalent to that of twenty fridges.

Product Information

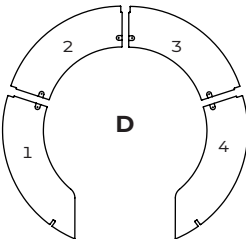

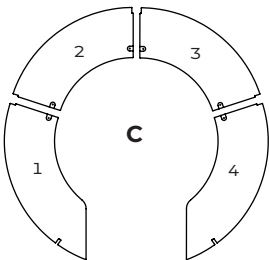

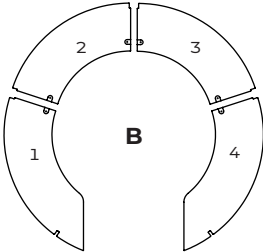

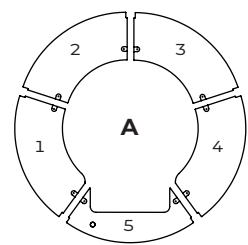

| | | | |
|-------------|---|-----|---|
| Material | <ul style="list-style-type: none">• Uncoated waterproof plywood (21 mm).• Stainless steel parts and connectors• Rubber stickers | Use | <p>You can store all kinds of food and beverages in your Groundfridge. As mentioned, you can use it to store your vegetables, cheeses and wines. And you can be quite creative about how and where you store your products. Experiment with all the different shapes and sizes to find what works best for you.</p> |
| Paint | <p>The shelves have not been coated or painted and although the material itself is rather durable, it will prove easier to clean if you give it a protective coating.</p> <p>Coating Advice: Use a water-based coating suitable for outdoor use</p> | | |
| Maintenance | <p>The shelves are rather easy to clean, you just need to stay mindful of the type of coating you used.</p> | | |

1

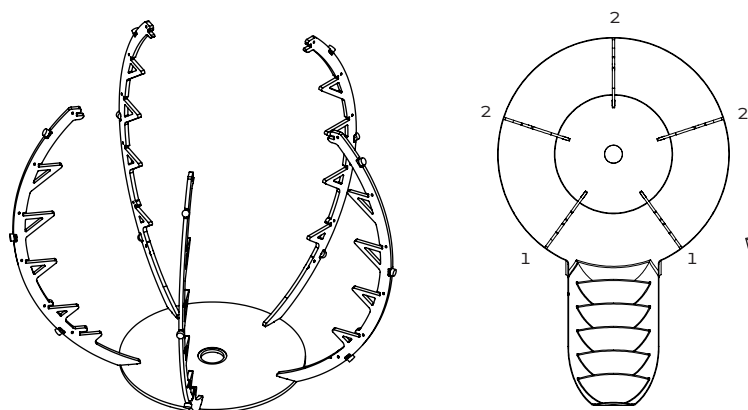

Step 1

Fit the rubber stickers to floorboard and place the floorboard in the centre of the Groundfridge.

Step 2

Try and screw the rubber spacers into each of the five beams as far as you can. It does rather matter which beam goes where. The one with the extra slot is marked beam 1.

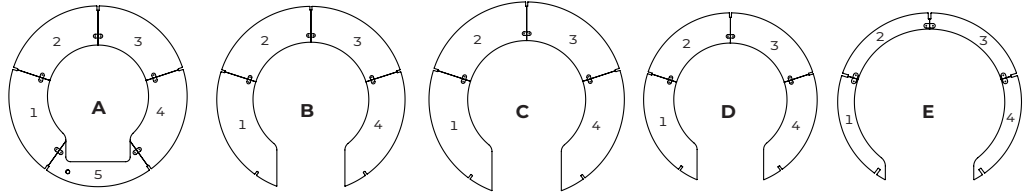

Step 3

Place the beams onto the floorboard.

Be careful! Put in the no. 1 beams on either side from the stairwell and make sure they're spaced evenly.

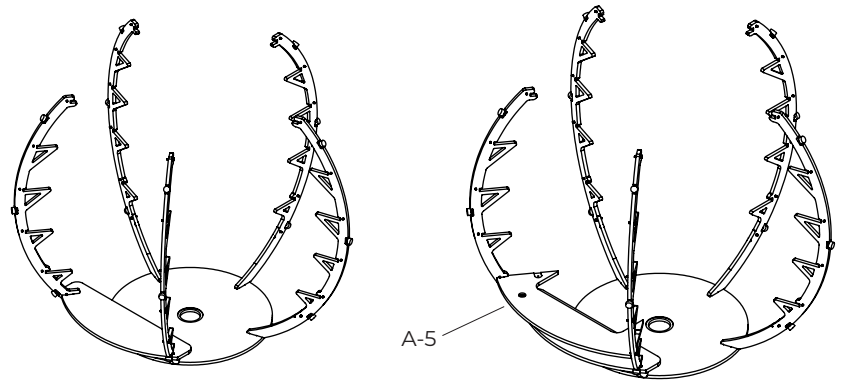

Step 4

Grab the shelves and lay them out to their correct order and size. Lay them out in a circle to see if they measure up.

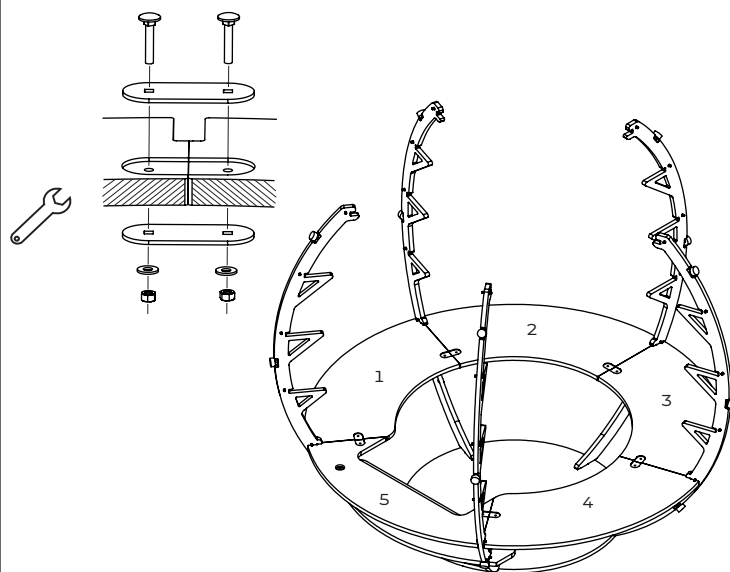

Step 5

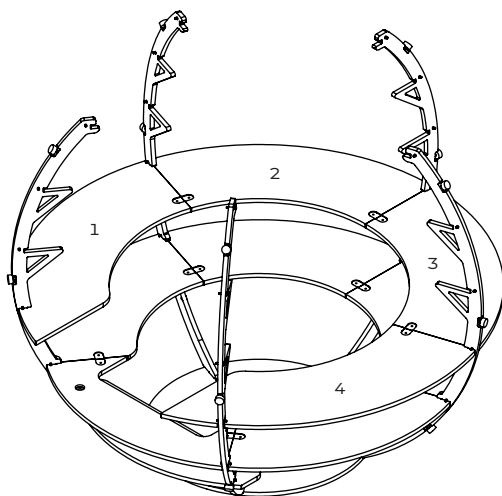

Drop the stairwell shelves into the bottom two slots as shown.

Step 6

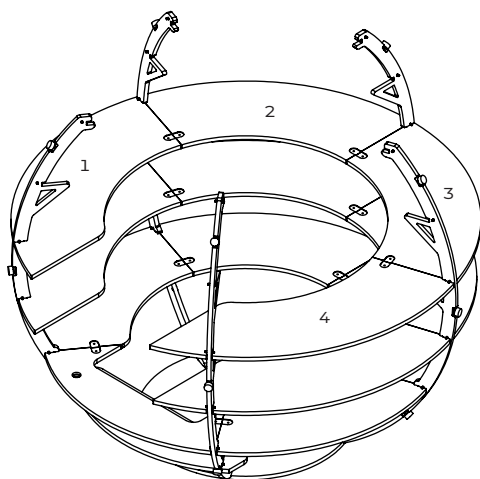

Slide the shelves for ring A into the beams one at a time starting with no. 1 and ending with no. 4. **Be careful!** Fix the shelves in the following order: 5-1, 1-2, 2-3, 3-4, 4-5. Use a spanner to fix the shelves. **Be careful!** Don't tighten them all the way. Leave that for last.

Step 7

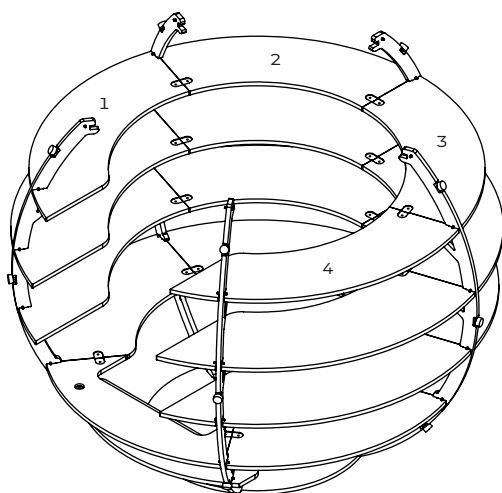

Repeat these steps to put in ring B.

Step 8

Repeat these steps to put in ring C.

Remember! Don't tighten the bolts all the way.

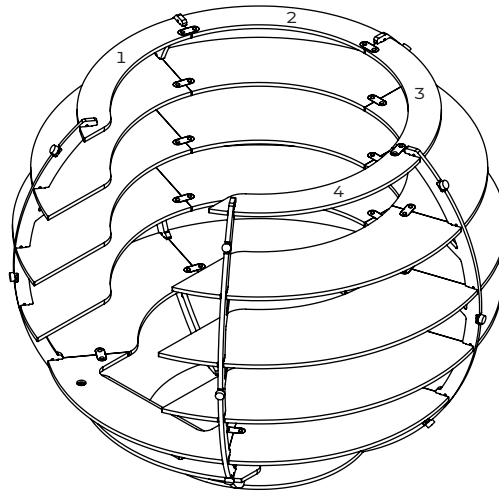

Step 9

Repeat these steps to put in ring D.

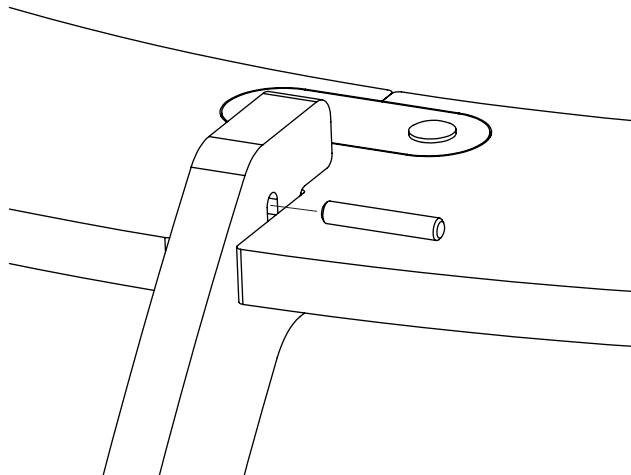

Step 10

Repeat these steps to put in ring E. You'll need to put in a bit of shoulder trying to slide the last one into position.

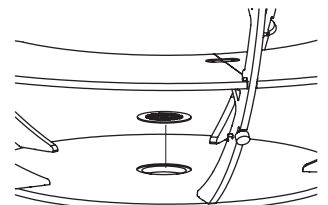

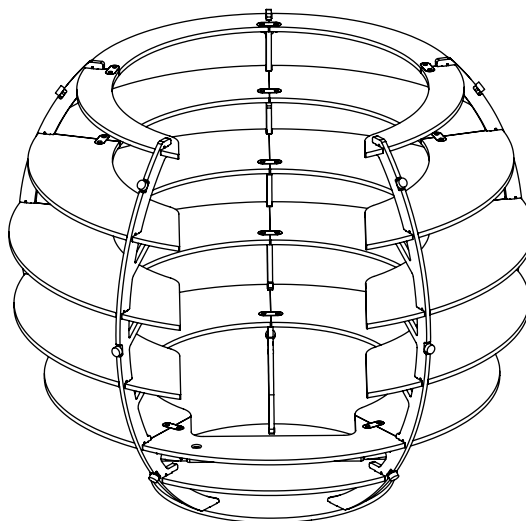

Step 11

Screw the rubber spacers outwards to allow the shelves to use the Groundfridge shell for support. Check to see if your beams are properly aligned vertically and if your shelves are level or not. Tighten all remaining bolts and insert the stabilising pins into the beams. You might need a hammer on this job. Keep the shelves from damaging by covering them with some cardboard.

Step 12

Drop the metal plate into the floorboard. Your shelves are now ready for painting. See the product information sheet for more information. Once you've done that, they're now ready for use. Enjoy your Groundfridge!
